SUBJECT: Painting FlexClad-400

FlexClad-400 in all finishes (Aluminum, Granite Gray, and White) may be painted with traditional exterior grade paints or may be coated with liquid roof coatings.

MFM recommends that the outer surface of the FlexClad-400 be cleaned before painting or coating to remove any oils, asphalts, dust, or dirt that may interfere with adhesion.

FlexClad-400 is easily cleaned with acetone, denatured alcohol, or similar non-oily solvent. Just wipe the outer surface with solvent and let dry before painting or coating.

For extremely dirty surfaces, MFM recommends first power washing the FlexClad-400 and then wiping the surface with a solvent.

MFM also recommends that a small sample of FlexClad-400 be prepared and painted or coated to ensure that the selected paint or coating will adhere properly.

While FlexClad-400 has a 10-Year Limited Warranty, this warranty only applies to the factory surface and material and does not cover any paint or coating applied after installation.
